</table>
1. Penalties of three types are applied to candidates’ work as follows:
   - Blunders - mathematical errors/omissions (-3)
   - Slips - numerical errors (-1)
   - Misreadings (provided task is not oversimplified) (-1).

   Frequently occurring errors to which these penalties must be applied are listed in the scheme. They are labelled: B1, B2, B3,…, S1, S2,…, M1, M2,…etc. These lists are not exhaustive.

2. When awarding attempt marks, e.g. Att(3), note that
   - any correct, relevant step in a part of a question merits at least the attempt mark for that part
   - if deductions result in a mark which is lower than the attempt mark, then the attempt mark must be awarded
   - a mark between zero and the attempt mark is never awarded.

3. Worthless work is awarded zero marks. Some examples of such work are listed in the scheme and they are labelled as W1, W2, …etc.

4. The phrase “hit or miss” means that partial marks are not awarded – the candidate receives all of the relevant marks or none.

5. The phrase “and stops” means that no more work of merit is shown by the candidate.

6. Special notes relating to the marking of a particular part of a question are indicated by an asterisk. These notes immediately follow the box containing the relevant solution.

7. The sample solutions for each question are not intended to be exhaustive lists – there may be other correct solutions. Any examiner unsure of the validity of the approach adopted by a particular candidate to a particular question should contact his/her advising examiner.

8. Unless otherwise indicated in the scheme, accept the best of two or more attempts – even when attempts have been cancelled.

9. The same error in the same section of a question is penalised once only.

10. Particular cases, verifications and answers derived from diagrams (unless requested) qualify for attempt marks at most.

11. A serious blunder, omission or misreading results in the attempt mark at most.

12. Do not penalise the use of a comma for a decimal point, e.g. €5.50 may be written as €5,50.
**QUESTION 1**

<table>
<thead>
<tr>
<th>Part (a)</th>
<th>10 (5, 5) marks</th>
<th>Att (2, 2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Part (b)</td>
<td>20 (5, 10, 5) marks</td>
<td>Att (2, 3, 2)</td>
</tr>
<tr>

<td>Att (2, 2, 2, 2)</td>
</tr>
</tbody>
</table>

**Part (a) (5, 5) marks Att (2, 2)**

1. (a) \( x^2 - 6x + t = (x + k)^2 \), where \( t \) and \( k \) are constants.

   Find the value of \( k \) and the value of \( t \).

(a) **E aggress coeficients**

   **5 marks** 

   **Values**

   **5 marks**

   1 (a)

   \[
   x^2 - 6x + t = (x + k)^2 \implies x^2 - 6x + t = x^2 + 2kx + k^2.
   \]

   \( \therefore 2k = -6 \) and \( t = k^2 \implies k = -3 \) and \( t = 9 \).

Or

(a) **Perfect square**

   **5 marks**

   **Values**

   **5 marks**

   1 (a)

   \[
   x^2 - 6x + t = (x + k)^2 \]

   \( (x^2 - 6x + t) \) is a perfect square

   \( (x - 3)^2 = x^2 - 6x + 9 \)

   \( \implies k = -3 \) and \( t = 9 \)

**Blunders (-3)**

B1 Expansion \((x + a)^2\) once only

B2 Not like-to-like in equating coefficients

B3 Indices
Part (b)  20 (5, 10, 5) marks  Att (2, 3, 2)

(b) Given that $p$ is a real number, prove that the equation $x^2 - 4px - x + 2p = 0$ has real roots.

(b) Equation arranged  5 marks  Att 2
Correct substitution in $b^2 - 4ac$  10 marks  Att 3
Finish  5 marks  Att 2

1 (b) $x^2 - 4px - x + 2p = 0 \Rightarrow x^2 + x(-4p - 1) + 2p = 0$.

$b^2 - 4ac = (-4p - 1)^2 - 4(2p) = 16p^2 + 8p - 8p + 1 = 16p^2 + 1 \geq 0$ for all $p$.

$\therefore$ Roots are real.

Blunders (-3)
B1 Expansion of $(a + b)^2$ once only
B2 Incorrect value $a$
B3 Incorrect value $b$
B4 Incorrect value $c$
B5 Inequality sign
B6 Indices
B7 Incorrect deduction or no deduction
Part (c) 20 (5, 5, 5, 5) marks Att (2, 2, 2, 2)

(c) $(x-2)$ and $(x+1)$ are factors of $x^3 + bx^2 + cx + d$.

(i) Express $c$ in terms of $b$.

(ii) Express $d$ in terms of $b$.

(iii) Given that $b$, $c$ and $d$ are three consecutive terms in an arithmetic sequence, find their values.

\[ f(2) \text{ and } f(-1) \quad 5 \text{ marks} \quad \text{Att 2} \]

\[ c \text{ in terms of } b \quad 5 \text{ marks} \quad \text{Att 2} \]

\[ d \text{ in terms of } b \quad 5 \text{ marks} \quad \text{Att 2} \]

\[ \text{Values} \quad 5 \text{ marks} \quad \text{Att 2} \]

1 (c) (i) $(x-2)$ is a factor $\Rightarrow f(2) = 0$. $\therefore 8 + 4b + 2c + d = 0 \Rightarrow 4b + 2c + d = -8$.

$(x+1)$ is a factor $\Rightarrow f(-1) = 0$. $\therefore -1 + b - c + d = 0 \Rightarrow b - c + d = 1$.

$\therefore 3b + 3c = -9 \Rightarrow b + c = -3 \Rightarrow c = -b - 3$.

1 (c) (ii) By part (i)

\[ 4b + 2c + d = -8 \]
\[ 2b - 2c + 2d = 2 \]
\[ 6b + 3d = -6 \quad \Rightarrow \quad 2b + d = -2 \quad \Rightarrow \quad d = -2b - 2. \]

1 (c) (iii) An arithmetic sequence $b$, $c$, $d$ $\Rightarrow c - b = d - c \Rightarrow 2c = b + d$.

$\therefore -2b - 6 = b - 2b - 2 \quad \Rightarrow \quad b = -4$.

$\therefore c = 1$ and $d = 6$.

</table>

Or

\( z_1 = s + 8i \Rightarrow |z_1| = 10 \)^<sub>\( \Rightarrow \sqrt{s^2 + 64} = 10 \Rightarrow s^2 + 64 = 100 \Rightarrow s^2 = 36 \Rightarrow s = \pm 6 \)</sub>

3 (b) (ii) 
\[
\tan \alpha = \tan \frac{\pi}{4} = 1 \\
\Rightarrow \frac{8}{|t|} = 1 \\
\Rightarrow |t| = 8 \Rightarrow t = -8
\]

\( \theta = \frac{3\pi}{4} \Rightarrow \alpha = \frac{\pi}{4} \)
(c) (i) Use De Moivre’s theorem to find, in polar form, the five roots of the equation $z^5 = 1$.

(ii) Choose one of the roots $w$, where $w \neq 1$. Prove that $w^2 + w^3$ is real.

### (c) (i)

$$z = cis \frac{2n\pi}{5}$$

**Five roots**

- $n = 0 \Rightarrow z_0 = 1$
- $n = 1 \Rightarrow z_1 = \cos \frac{2\pi}{5} + i\sin \frac{2\pi}{5}$
- $n = 2 \Rightarrow z_2 = \cos \frac{4\pi}{5} + i\sin \frac{4\pi}{5}$
- $n = 3 \Rightarrow z_3 = \cos \frac{6\pi}{5} + i\sin \frac{6\pi}{5}$
- $n = 4 \Rightarrow z_4 = \cos \frac{8\pi}{5} + i\sin \frac{8\pi}{5}$

### (c) (ii)

Let $w = z_1 = \cos \frac{2\pi}{5} + i\sin \frac{2\pi}{5}$.

$$w^2 + w^3 = \left( \cos \frac{2\pi}{5} + i\sin \frac{2\pi}{5} \right)^2 + \left( \cos \frac{2\pi}{5} + i\sin \frac{2\pi}{5} \right)^3$$

$$= \cos \frac{4\pi}{5} + i\sin \frac{4\pi}{5} + \cos \frac{6\pi}{5} + i\sin \frac{6\pi}{5}$$

$$= \left( \cos \frac{6\pi}{5} + \cos \frac{4\pi}{5} \right) + i\left( \sin \frac{6\pi}{5} + \sin \frac{4\pi}{5} \right)$$

$$= 2\cos \frac{\pi}{5} \cos \frac{\pi}{5} + i \left( 2\sin \frac{\pi}{5} \cos \frac{\pi}{5} \right)$$

$$= -2\cos \frac{\pi}{5} + i(0),$$

$$= -2\cos \frac{\pi}{5},$$

which is real.

</tr>
<tr>
<td>( P(k) )</td>
<td>5 marks</td>
</tr>
<tr>
<td>( P(k + 1) )</td>
<td>10 marks</td>
</tr>
</tbody>
</table>

Test for \( n = 1 \), \( P(1) = 3^1 - 1 = 2 \).

\[ \therefore \text{ True for } n = 1. \]

Assume \( P(k) \). (That is, assume true for \( n = k \)).

i.e., assume \( S_k = 3^k - 1 \), where \( S_k \) is the sum of the first \( k \) terms.

Deduce \( P(k + 1) \). (That is, deduce truth for \( n = k+1 \)).

i.e. deduce that \( S_{k+1} = 3^{k+1} - 1 \).

Proof: \( S_{k+1} = S_k + T_{k+1} = 3^k - 1 + 2 \times 3^k = 3 \left( 3^k \right) - 1 = 3^{k+1} - 1 \).

\[ \therefore \text{ True for } n = k+1. \]

So, \( P(k + 1) \) is true whenever \( P(k) \) is true. Since \( P(1) \) is true, then, by induction, \( P(n) \) is true, for all positive integers \( n \).

Blunders (-3)

(c) (i) Expand \( \left( x + \frac{1}{x} \right)^2 \) and \( \left( x + \frac{1}{x} \right)^4 \).

(ii) Hence, or otherwise, find the value of \( x^4 + \frac{1}{x^4} \), given that \( x + \frac{1}{x} = 3 \).

5 (c) (i)

\[
\left( x + \frac{1}{x} \right)^2 = x^2 + 2 + \frac{1}{x^2}.
\]

\[
\left( x + \frac{1}{x} \right)^4 = \left( x^2 + 2 + \frac{1}{x^2} \right)^2 = x^4 + 4x^2 + 6 + \frac{4}{x^2} + \frac{1}{x^4}.
\]

OR

\[
\left( x + \frac{1}{x} \right)^4 = \left( x^2 + \frac{1}{x^2} \right)^2 = x^4 + 2 + \frac{1}{x^4} + 4x^2 + \frac{4}{x^2} + 4.
\]

5 (c) (ii)

\[
\left( x + \frac{1}{x} \right)^4 = 81 = x^4 + 4x^2 + 6 + \frac{4}{x^2} + \frac{1}{x^4} = \left( x^4 + \frac{1}{x^4} \right) + 4 \left( x^2 + \frac{1}{x^2} \right) + 6.
\]

\[\therefore x^4 + \frac{1}{x^4} = 75 - 4 \left( x^2 + \frac{1}{x^2} \right)\]

But \( x^2 + \frac{1}{x^2} = 9 \Rightarrow x^2 + \frac{1}{x^2} = 7 \).

\[\therefore x^4 + \frac{1}{x^4} = 75 - 28 = 47.\]

QUESTION 6

Part (a) 10 (5, 5) marks  Att (2, 2)
Part (b) 20 (5, 5, 10) marks  Att (2, 2, 3)
Part (c) 20 (5, 5, 5, 5) marks  Att (2, 2, 2, 2)

(a) The equation \( x^3 + x^2 - 4 = 0 \) has only one real root.
Taking \( x_1 = \frac{3}{2} \) as the first approximation to the root, use the Newton-Raphson
method to find \( x_2 \), the second approximation.

(a) Differentiation 5 marks  Att 2
Value 5 marks  Att 2

6 (a)

\[
x_2 = f\left(\frac{3}{2}\right) - \frac{f\left(\frac{3}{2}\right)}{f'(\frac{3}{2})}.
\]

\[
f(x) = x^3 + x^2 - 4 \quad \Rightarrow \quad f\left(\frac{3}{2}\right) = \frac{27}{8} + \frac{9}{4} - 4 = \frac{13}{8}.
\]

\[
f'(x) = 3x^2 + 2x \quad \Rightarrow \quad f'(\frac{3}{2}) = \frac{27}{4} + 3 = \frac{39}{4}.
\]

\[
\therefore \quad x_2 = \frac{3}{2} - \frac{\frac{13}{8}}{\frac{39}{4}} = \frac{3}{2} - \frac{1}{6} = \frac{8}{6} = \frac{4}{3}.
\]

(c) The function \( f(x) = (1 + x) \log_e (1 + x) \) is defined for \( x > -1 \).

(i) Show that the curve \( y = f(x) \) has a turning point at \( \left( \frac{1-e}{e}, -\frac{1}{e} \right) \).

(ii) Determine whether the turning point is a local maximum or a local minimum.

(c) (i) \( f'(x) \)

Value of \( x \)  
Value of \( y \)

(c) (ii) Turning points

7 (c) (i)  

\[
f(x) = (1 + x) \log_e (1 + x) \quad \Rightarrow \quad f'(x) = (1 + x) \left( \frac{1}{1 + x} \right) + \log_e (1 + x) = 1 + \log_e (1 + x).
\]

\[f'(x) = 0 \quad \Rightarrow \quad \log_e (1 + x) = -1 \quad \Rightarrow \quad 1 + x = e^{-1}. \quad \therefore \quad x = \frac{1-e}{e}.
\]

\[y = \left( \frac{1}{e} \right) \log_e \left( \frac{1}{e} \right) \quad \Rightarrow \quad y = \frac{1}{e} (-\log_e e) = -\frac{1}{e}. \quad \text{So turning point is } \left( \frac{1-e}{e}, -\frac{1}{e} \right).
\]

OR

7 (c) (i) \( f'(x) = \left[ \log_e (1 + x) \right] + 1 \)

At \( x = \frac{1-e}{e} \), \( f'(x) = \log_e \left( \frac{1+\frac{1-e}{e}}{e} \right) + 1 = \log_e \left( \frac{e+1-e}{e} \right) + 1 = \log_e \left( \frac{1}{e} \right) + 1 = \left[ \log_e (1) - \log_e (e) \right] + 1 = 0 - 1 + 1 = 0.

So \( f'(x) = 0 \) at \( x = \frac{1-e}{e} \).

Also, at \( x = \frac{1-e}{e}, \quad y = \left( \frac{1}{e} \right) \log_e \left( \frac{1}{e} \right) = \frac{1}{e} (-\log_e e) = -\frac{1}{e}. \)

So turning point is \( \left( \frac{1-e}{e}, -\frac{1}{e} \right) \).

7 (c) (ii)  

\[
f''(x) = \frac{1}{1 + x} \Rightarrow f'' \left( \frac{1-e}{e} \right) = \frac{1}{1 + \frac{1-e}{e}} = \frac{e}{1} = e > 0. \quad \therefore \quad \left( \frac{1-e}{e}, -\frac{1}{e} \right) \text{ is a local minimum.}
\]
(a) Find \( \int (\sin 2x + e^{4x}) \, dx \).

\]

\[
\left| \int_{0}^{1} (12x^3 - 48x^2 + 36x) \, dx \right| = \left. \left[ 3x^4 - 16x^3 + 18x^2 \right] \right|_0^1 = |3 - 16 + 18| = 5.
\]

\[
\left| \int_{1}^{3} (12x^3 - 48x^2 + 36x) \, dx \right| = \left. \left[ 3x^4 - 16x^3 + 18x^2 \right] \right|_1^3
\]

\[
= \left| (243 - 432 + 162) - (3 - 16 + 18) \right| = |-27 - 5| = 32
\]

\[
\therefore \text{the required area is} \ 5 + 32 = 37.
\]

Blunders (-3)
B1 Integration
B2 Indices
B3 Error in area formula
B4 Incorrect order in applying limits
B5 Not calculating substituted limits
B6 Uses \( \int y \, dx \) for area formula

Attempts
A1 Uses volume formula
A2 Uses \( y^2 \) in formula

Worthless
W1 Wrong area formula and no work
(c) (i) Find, in terms of \( a \) and \( b \)
\[
I = \int_a^b \frac{\cos x}{1 + \sin x} \, dx.
\]
(ii) Find in terms of \( a \) and \( b \)
\[
J = \int_a^b \frac{\sin x}{1 + \cos x} \, dx.
\]
(iii) Show that if \( a + b = \frac{\pi}{2} \), then \( I = J \).

8 (c) (i)
\[
I = \int_a^b \frac{\cos x}{1 + \sin x} \, dx.
\]
Let \( u = 1 + \sin x \) \quad \therefore \quad du = \cos x \, dx.
\[
I = \int_{1 + \sin a}^{1 + \sin b} \frac{1 + \sin b}{1 + \sin a} \, du = \left[ \log_e u \right]_{1 + \sin a}^{1 + \sin b} = \log_e (1 + \sin b) - \log_e (1 + \sin a).
\]
\[
I = \log_e \left( \frac{1 + \sin b}{1 + \sin a} \right).
\]

8 (c) (ii)
\[
J = \int_a^b \frac{\sin x}{1 + \cos x} \, dx.
\]
Let \( u = 1 + \cos x \) \quad \therefore \quad du = -\sin x \, dx.
\[
J = \int_{1 + \cos a}^{1 + \cos b} \frac{-1}{1 + \cos a} \, du = -\left[ \log_e u \right]_{1 + \cos a}^{1 + \cos b} = -\log_e (1 + \cos b) + \log_e (1 + \cos a).
\]
\[
J = \log_e \left( \frac{1 + \cos b}{1 + \cos a} \right).
\]

8 (c) (iii)
When \( a + b = \frac{\pi}{2} \), then
\[
I = \log_e \left( \frac{1 + \sin b}{1 + \sin a} \right) = \log_e \left( \frac{1 + \sin \left( \frac{\pi}{2} - a \right)}{1 + \sin \left( \frac{\pi}{2} - b \right)} \right) = \log_e \left( \frac{1 + \cos a}{1 + \cos b} \right) = J.

GENERAL GUIDELINES FOR EXAMINERS – PAPER 2

1. Penalties of three types are applied to candidates’ work as follows:
   • Blunders - mathematical errors/omissions (-3)
   • Slips - numerical errors (-1)
   • Misreadings (provided task is not oversimplified) (-1).

   Frequently occurring errors to which these penalties must be applied are listed in the scheme. They are labelled: B1, B2, B3,…, S1, S2,…, M1, M2,…etc. These lists are not exhaustive.

2. When awarding attempt marks, e.g. Att(3), note that
   • any correct, relevant step in a part of a question merits at least the attempt mark for that part
   • if deductions result in a mark which is lower than the attempt mark, then the attempt mark must be awarded
   • a mark between zero and the attempt mark is never awarded.

3. Worthless work is awarded zero marks. Some examples of such work are listed in the scheme and they are labelled as W1, W2, …etc.

4. The phrase “hit or miss” means that partial marks are not awarded – the candidate receives all of the relevant marks or none.

5. The phrase “and stops” means that no more work of merit is shown by the candidate.

6. Special notes relating to the marking of a particular part of a question are indicated by an asterisk. These notes immediately follow the box containing the relevant solution.

7. The sample solutions for each question are not intended to be exhaustive lists – there may be other correct solutions. Any examiner unsure of the validity of the approach adopted by a particular candidate to a particular question should contact his/her advising examiner.

8. Unless otherwise indicated in the scheme, accept the best of two or more attempts – even when attempts have been cancelled.

9. The same error in the same section of a question is penalised once only.

10. Particular cases, verifications and answers derived from diagrams (unless requested) qualify for attempt marks at most.

11. A serious blunder, omission or misreading results in the attempt mark at most.

12. Do not penalise the use of a comma for a decimal point, e.g. €5.50 may be written as €5,50.
QUESTION 1

Part (a) 10 marks Att 3
Part (b) 15 (5, 10) marks Att (2, 3)
Part (c) 25 (10, 15) marks Att (3, 5)

1 (a) A circle with centre (3, –4) passes through the point (7, –3).
Find the equation of the circle.

(a) 10 marks Att 3

Centre is (3, –4) and \( r = \sqrt{(3 - 7)^2 + (-4 + 3)^2} = \sqrt{16 + 1} = \sqrt{17} \).
Circle: \((x - 3)^2 + (y + 4)^2 = 17\).

or

1 (a)

\[ x^2 + y^2 - 6x + 8y + c = 0 \quad \text{But (7,-3) \in Circle} \]
\[ \Rightarrow 49 + 9 - 42 - 24 + c = 0 \quad \Rightarrow c = 8 \]
Equation of circle \( x^2 + y^2 - 6x + 8y + 8 = 0 \)

Blunders (-3)
B1 Error in substituting into distance formula
B2 Incorrect sign assigned to centre in equation of circle

Slips (-1)
S1 Arithmetic error

Attempts (3marks)
A1 Radius length
A2 Equation of circle without radius evaluated
A3 Equation of circle without substitution for \( c \)
A4 Substitution of (7,-3) and stops
A5 \( x^2 + y^2 = 17 \)

Misreading(-1)
M1 (7,-3) as centre of circle
(b)(i) 5 marks  
1 (b) (i) Centre is $(4, 5)$.  \[ r = \sqrt{16 + 25 - 32} = \sqrt{9} = 3. \]

or

1 (b) (i)  
\[
\begin{align*}
(x^2 - 8x + 16) + (y^2 - 10y + 25) &= -32 + 16 + 25 \\
(x - 4)^2 + (y - 5)^2 &= 9
\end{align*}
\]
Centre $(4, 5)$  Radius $= \sqrt{9}$ or 3

Both correct 5 marks
One correct 2 marks
None correct 0 marks

(b)(ii) 10 marks  
1 (b) (ii)  
\[
\frac{3(4) + 4(5) + k}{\sqrt{9 + 16}} = 3 \Rightarrow 32 + k = 15 \Rightarrow 32 + k = \pm 15.
\]
32 + k = 15 or 32 + k = -15 \(\Rightarrow k = -17 \text{ or } k = -47.\)

* Accept candidates centre and radius from (b)(i)

or

1 (b) (ii)  
\[
y = \frac{-3x - k}{4}
\]
\[
x^2 + \left(\frac{-3x - k}{4}\right)^2 - 8x - 10\left(\frac{-3x - k}{4}\right) + 32 = 0
\]
25 \(x^2 + (6k-8) + k^2 + 40k + 512 = 0\)
Equal roots \(\Rightarrow (6k-8)^2 = 100 (k^2 + 40k + 512)\)
\[
64k^2 + 4096k + 51136 = 0
\]
\[
k^2 + 64k + 799 = 0
\]
\[
(k + 17)(k + 47) = 0 \text{  } k = -17 \text{ and } k = -47
\]

Blunders (-3)  
B1  Error in substitution into perpendicular distance formula  
B2  One value of $k$ only  
B3  Incorrect squaring  
B4  Error in factors

Slips (-1)  
S1  Arithmetic error

Page 43 of 81
Attempts (3 marks)

A1 Some correct substitution into perpendicular formula
A2 Some correct substitution of either \( x \) or \( y \) from linear equation into circle

Part (c) 25 (10, 15) marks Att (3, 5)

1 (c) A circle has the line \( y = 2x \) as a tangent at the point \((2, 4)\). The circle also contains the point \((4, -2)\). Find the equation of the circle.

(c) First equation in two variables 10 marks Att 3

Finish 15 marks Att 5

1 (c) Slope of tangent = 2 \( \Rightarrow \) slope of normal at \((2, 4)\) = \(-\frac{1}{2}\).

\[
\therefore \text{Equation of normal: } (y - 4) = -\frac{1}{2}(x - 2) \Rightarrow 2y - 8 = -x + 2 \Rightarrow x + 2y = 10.
\]

Mid-point of chord joining \((2, 4)\) and \((4, -2)\) is \((3, 1)\).

Slope of chord = \(\frac{4 + 2}{2 - 4} = -3\).

\[
\therefore \text{Equation of mediatior is } y - 1 = \frac{1}{3}(x - 3) \Rightarrow 3y - 3 = x - 3y = 0.
\]

\[
x + 2y = 10
\]

\[
x - 3y = 0
\]

\[
5y = 10 \Rightarrow y = 2 \text{ and } x = 6 \Rightarrow \text{Centre is } (6, 2).
\]

\[
r = \sqrt{(2 - 6)^2 + (4 - 2)^2} = \sqrt{16 + 2} = \sqrt{20}.
\]

\[
\therefore \text{Equation of circle is } (x - 6)^2 + (y - 2)^2 = 20.
\]

Or

\[
x^2 + y^2 + 2gx + 2fy + c = 0.
\]

\[
(2,4) \in \text{Circle } \Rightarrow 20 + 4g + 8f + c = 0
\]

\[
(4,-2) \in \text{Circle } \Rightarrow 20 + 8g -4f + c = 0
\]

\[
\therefore g = 3f \Rightarrow \text{centre } (-3f, -f)
\]

Slope of tangent = 2 \( \Rightarrow \) slope of normal at \((2, 4)\) = \(-\frac{1}{2}\).

\[
\therefore \text{Equation of normal: } (y - 4) = -\frac{1}{2}(x - 2) \Rightarrow 2y - 8 = -x + 2 \Rightarrow x + 2y = 10.
\]

\[
-3f + 2(-f) = 10 \Rightarrow f = -2 \Rightarrow \text{Centre is } (6, 2)
\]

\[
r = \sqrt{(2 - 6)^2 + (4 - 2)^2} = \sqrt{16 + 2} = \sqrt{20}.
\]

\[
\therefore \text{equation of circle is } (x - 6)^2 + (y - 2)^2 = 20.
\]
First Equation:

Blunders (-3)
B1 Error in substituting into slope formula
B2 Error in substituting into midpoint formula
B3 Error in substituting into equation of line formula
B4 Incorrect signs for centre of circle

Slips (-1)
S1 Arithmetic error

Attempts (3 marks)
A1 Slope of Tangent
A2 Midpoint of chord

Finish:
Slips and blunders do not apply. Award 0, 5 or 15 marks, as follows:

Fully correct: 15 marks

Attempt (5 marks)
A1 Second equation in two variables
QUESTION 2

Part (a) 10 marks  Att 3

2 (a)  A, B and C are points and O is the origin.
\[ \vec{a} = 2\vec{i} + 3\vec{j}, \quad \vec{b} = -3\vec{i} - 6\vec{j} \text{ and } \vec{AC} = \vec{OB}. \]
Express \( \vec{c} \) in terms of \( \vec{i} \) and \( \vec{j} \).

\[ \frac{\text{Blunders}(-3)}{\text{B1 Error in } \vec{AC} = \vec{c} - \vec{a} \text{ or equivalent}} \quad \frac{\text{B2 Answer not expressed in correct form}}{\text{Slips}(-1)} \quad \frac{\text{S1 Arithmetic error}}{\text{Attempts} (3 \text{marks})} \quad \frac{\text{A1 } \vec{AC} = \vec{c} - \vec{a} \text{ and stops}}{\text{Part (b) 20 (5, 15) marks  Att (2, 5)}} \]

2 (b)  \( \vec{u} = 2\vec{i} + \vec{j} \) and \( \vec{v} = -\vec{i} + k\vec{j} \) where \( k \in \mathbb{R} \).

(i)  Express \( |\vec{v}| \) and \( \vec{u} \cdot \vec{v} \) in terms of \( k \).

(ii)  Given that \( \cos \theta = -\frac{1}{\sqrt{2}} \), where \( \theta \) is the angle between \( \vec{u} \) and \( \vec{v} \), find the two possible values of \( k \).

2 (b) (i)  5 marks  Att 2

\[ |\vec{v}| = |\vec{-i} + k\vec{j}| = \sqrt{1 + k^2}. \]
\[ \vec{u} \cdot \vec{v} = (2\vec{i} + \vec{j})(-\vec{i} + k\vec{j}) = -2 + k. \]

Both correct: 5 marks
One correct: 2 marks
None correct: 0 marks
\[
\cos \theta = \frac{\vec{u} \cdot \vec{v}}{|\vec{u}| |\vec{v}|} \Rightarrow \frac{-2 + k}{\sqrt{5}\sqrt{1+k^2}} = -\frac{1}{\sqrt{2}}.
\]
\[
\therefore \sqrt{5}(-2 + k) = -\sqrt{5}\sqrt{1+k^2} \Rightarrow 2(-2 + k)^2 = 5 + 5k^2 \Rightarrow 5k^2 + 5 = 8 - 8k + 2k^2
\]
\[
\therefore 3k^2 + 8k - 3 = 0 \Rightarrow (3k - 1)(k + 3) = 0 \Rightarrow k = \frac{1}{3}, k = -3.
\]

**Attempt (5 marks)**

A1 Substitutes correctly

---

2 (c) \(OABC\) is a parallelogram where \(O\) is the origin.

\(Q\) is the midpoint of \([BC]\).

\([AQ]\) is extended to \(R\) such that \(|AQ| = |QR|\).

(i) Express \(\vec{q}\) in terms of \(\vec{a}\) and \(\vec{c}\).

(ii) Express \(\vec{AQ}\) in terms of \(\vec{a}\) and \(\vec{c}\).

(iii) Show that the points \(O, C\) and \(R\) are collinear.

(c) (i) 5 marks Att 2

\[\vec{q} = \vec{c} + \frac{1}{2} \vec{a}.\]

**Blunders (-3)**

B1 \(\vec{c} \neq \frac{1}{2} \vec{a}\)

B2 Answer not in required form

**Slips (-1)**

S1 Arithmetic error

**Attempts (2 marks)**

A1 A correct expression with \(\vec{q}\).
### (c) (ii) 5 marks

| 2 (c) (ii) | \[ \overrightarrow{AQ} = \overrightarrow{q} - \overrightarrow{a} = \frac{1}{2} \overrightarrow{a} + \overrightarrow{c} - \overrightarrow{a} = \overrightarrow{c} - \frac{1}{2} \overrightarrow{a}. \] |

**Blunders (-3)**

| B1 | \[ \overrightarrow{AQ} \neq \overrightarrow{q} - \overrightarrow{a} \] |
| B2 | Answer not in required form |

**Slips (-1)**

| S1 | Arithmetic error |

**Attempts (2 marks)**

| A1 | A correct expression with \[ \overrightarrow{AQ} \] |
| A2 | \[ \overrightarrow{AQ} = \overrightarrow{q} - \overrightarrow{a} \] and stops |

### (c) (iii) 10 marks

| 2 (c) (iii) | \[ \overrightarrow{r} = \overrightarrow{a} + \overrightarrow{AR} = \overrightarrow{a} + 2 \overrightarrow{AQ} = \overrightarrow{a} + 2 \overrightarrow{c} - \overrightarrow{a} = 2 \overrightarrow{c}. \] As \( \overrightarrow{r} = 2 \overrightarrow{c} \), then points \( O, C \) and \( R \) are collinear. | Hit /Miss |
QUESTION 3

Part (a) 10 marks Att 3
Part (b) 10 (5, 5) marks Att (2, 2)
Part (c) 30 (10, 20) marks Att (3, 6)

Part (a) 10 marks Att 3

3 (a) The line $3x + 4y - 7 = 0$ is perpendicular to the line $ax - 6y - 1 = 0$. Find the value of $a$.

\[
\text{Slope of } 3x + 4y - 7 = 0 \text{ is } -\frac{3}{4}. \text{ Slope of } ax - 6y - 1 = 0 \text{ is } \frac{a}{6}.
\]

\[
\therefore -\frac{3}{4} \times \frac{a}{6} = -1 \implies -3a = -24 \implies a = 8.
\]

Blunders (-3)
B1 Error in slope
B2 Product of slopes ≠ -1
B3 Product of slopes = -1 but fails to finish

Slips (-1)
S1 Arithmetic error

Attempts (3 marks)
A1 Slope of one line found

Part (b) 10 (5, 5) marks Att (2, 2)

3 (b) (i) The line $4x - 5y + k = 0$ cuts the $x$-axis at $P$ and the $y$-axis at $Q$. Write down the co-ordinates of $P$ and $Q$ in terms of $k$.

(ii) The area of the triangle $OPQ$ is 10 square units, where $O$ is the origin. Find the two possible values of $k$.

(b) (i) 5 marks Att 2

3 (b) (i)

\[
P\left(-\frac{k}{4}, 0\right), Q\left(0, \frac{k}{5}\right).
\]

Blunders (-3)
B1 $P$ and $Q$ not in coordinate form
B2 $P$ or $Q$ only correct

Slips (-1)
S1 Arithmetic error
Attempts (2 marks)
A1 \[-\frac{k}{4} \text{ or } \frac{k}{5} \] written
A2 \[ \left(0, -\frac{k}{4}\right) \left(\frac{k}{5}, 0\right) \]

(b) (ii) 5 marks \[\text{Att 2}\]

3 (b) (ii) Area \( \Delta OPQ = 10 \Rightarrow \frac{1}{2} \left| \begin{array}{cc} -\frac{k}{4} & \frac{k}{5} \\ 0 & 0 \end{array} \right| = 10. \ \therefore k^2 = 400 \Rightarrow k = \pm 20. \]

Blunders (-3)
B1 Error in substitution into formula for area of triangle
B2 One value of \( k \) only found

Slips (-1)
S1 Arithmetic error

Attempts (2 marks)
A1 Some correct substitution into formula for area of triangle
A2 \( k^2 = -400 \) or equivalent

Part (c) 30(10,20) marks \[\text{Att (3, 6)}\]

3 (c) (i) \( f \) is the transformation \( (x, y) \rightarrow (x', y') \), where \( x' = x + y \) and \( y' = x - y \).

The line \( l \) has equation \( y = mx + c \).

(i) Find the equation of \( f(l) \), the image of \( l \) under \( f \).

(ii) Find the value(s) of \( m \) for which \( f(l) \) makes an angle of \( 45^\circ \) with \( l \).

(c) (i) 10 marks \[\text{Att 3}\]

3 (c) (i)
\[
\begin{align*}
x' &= x + y \\
y' &= x - y \\
x' + y' &= 2x \Rightarrow x = \frac{1}{2}(x' + y') \\
y &= x' - x = x' - \frac{1}{2}(x' + y') \Rightarrow y = \frac{1}{2}(x' - y'). \\
f(l): \frac{1}{2}(x' - y') &= \frac{m}{2}(x' + y') + c \Rightarrow x' - y' = mx' + my' + 2c. \\
f(l): x'(m-1) + y'(m+1) + 2c = 0.
\end{align*}
\]

Blunders (-3)
B1 Image of line not in the form \( ax' + by' + c = 0 \) or \( y' = mx' + c \).
B2 Incorrect matrix
B3 Incorrect matrix multiplication
Slips (-1)
S1 Arithmetic error

Attempts (3 marks)
A1 Expressing x or y in terms of primes
A2 Correct matrix for f when finding f(l)
A3 Correct image point on f(l)

\[(c) \text{ (ii) 20 marks Att 6}\]

\[
\text{Slope } l = m \text{ and slope } f(l) = \frac{-(m-1)}{m+1} = \frac{1-m}{1+m}.
\]

\[
\tan 45^\circ = \frac{1-m - m}{1 + \frac{1-m}{1+m}} \Rightarrow \frac{1-m-m(1+m)}{1+m+(1-m)m} = 1.
\]

\[
\therefore \frac{1-2m-m^2}{1+2m-m^2} = 1 \Rightarrow 1-2m-m^2 = \pm (1+2m-m^2).
\]

\[
\therefore 1-2m-m^2 = 1+2m-m^2 \Rightarrow 4m = 0 \Rightarrow m = 0.
\]

\[
\text{OR } 1-2m-m^2 = -1-2m+m^2 \Rightarrow -2m^2 = -2 \Rightarrow m^2 = 1 \Rightarrow m = \pm 1.
\]

\[(m = -1 \text{ gives denominator of 0 for slope of } f(l), \text{ but is still a solution, since in this case } f(l) \text{ is vertical and } l \text{ makes an angle of } 45^\circ \text{ with it.})\]

\[
\therefore \text{ solutions are } m = 0, m = 1, m = -1.
\]

Attempt (6 marks)
A1 Substitutes correctly into formula.

Note: all three solutions not found \(\Rightarrow\) attempt mark at most.
The area of a triangle $PQR$ is $20 \text{ cm}^2$. $|PQ| = 10 \text{ cm}$ and $|PR| = 8 \text{ cm}$. Find the two possible values of $\angle QPR$.

\[
\text{Area } \triangle PQR = 20 \Rightarrow \frac{1}{2}(10)(8)\sin \angle QPR = 20. \Rightarrow \sin \angle QPR = \frac{1}{2} \Rightarrow \angle QPR = 30^\circ \text{ or } 150^\circ.
\]

**Blunders (-3)**

Attempt (5 marks)
A1 Correct expression for $r$ in terms of $p$ and $q$
QUESTION 5

Part (a) 10 marks Att 3

Part (b) 15 (10, 5) marks Att (3, 2)

Part (c) 25 (10, 5, 10) marks Att (3, 2, 3)

(a) 10 marks Att 3

5 (a) Given that \( \tan \theta = \frac{1}{3} \), show that \( \tan 2\theta = \frac{3}{4} \).

\[
\tan 2\theta = \frac{2 \tan \theta}{1 - \tan^2 \theta} = \frac{\frac{2}{3}}{1 - \frac{1}{9}} = \frac{2 \times 9}{8} = \frac{3}{4}.
\]

(b) 15 (10, 5) marks Att (3, 2)

5 (b) \[\tan \theta = \frac{1}{3} \Rightarrow \theta \text{ in } 1st \text{ or } 3rd \text{ quadrant}\]

\( \sin \theta \) and \( \cos \theta \) both positive in 1st quadrant and both negative 3rd quadrant

\[\Rightarrow \sin \theta = \pm \frac{1}{\sqrt{10}} \text{ and } \cos \theta = \pm \frac{3}{\sqrt{10}}, \text{ (both having same sign)}\]

In the case of both positive:

\[
\tan 2\theta = \frac{\sin 2\theta}{\cos 2\theta} = \frac{2 \sin \theta \cos \theta}{\cos^2 \theta - \sin^2 \theta} = \frac{2 \left( \frac{1}{\sqrt{10}} \right) \left( \frac{3}{\sqrt{10}} \right)}{\left( \frac{3}{\sqrt{10}} \right)^2 - \left( \frac{1}{\sqrt{10}} \right)^2} = \frac{6}{8} = \frac{3}{4}
\]

and in the case of both negative:

\[
\tan 2\theta = \frac{\sin 2\theta}{\cos 2\theta} = \frac{2 \sin \theta \cos \theta}{\cos^2 \theta - \sin^2 \theta} = \frac{2 \left( -\frac{1}{\sqrt{10}} \right) \left( -\frac{3}{\sqrt{10}} \right)}{\left( -\frac{3}{\sqrt{10}} \right)^2 - \left( -\frac{1}{\sqrt{10}} \right)^2} = \frac{3}{4}
\]

Blunders (-3)
B1 Error substituting into \( \tan 2\theta \) formula
B2 Incorrect application of Pythagoras
B3 Error substituting into \( \sin 2\theta \) and/or \( \cos 2\theta \) formula(e)
B4 One quadrant only

Slips (-1)
S1 Arithmetic error

Attempts (3 marks)
A1 Some substitution into \( \tan 2\theta \) formula
A2 Effort at application of Pythagoras
5 (b) A triangle has sides of lengths 4, 5 and 6.
The angles of the triangle are $A$, $B$ and $C$, as in diagram.

(i) Using the cosine rule, show that $\cos A + \cos C = \frac{7}{8}$.

(ii) Show that $\cos(A + C) = -\frac{9}{16}$.

(b) (i) 10 marks

5 (b) (i)

\[
\begin{align*}
\cos A &= \frac{5^2 + 6^2 - 4^2}{2(5)(6)} = \frac{25 + 36 - 16}{60} = \frac{45}{60} = \frac{3}{4} \\
\cos C &= \frac{5^2 + 4^2 - 6^2}{2(4)(5)} = \frac{25 + 16 - 36}{40} = \frac{5}{40} = \frac{1}{8}.
\end{align*}
\]
\[
\therefore \cos A + \cos C = \frac{3}{4} + \frac{1}{8} = \frac{7}{8}.
\]

Blunders (-3)
B1 Error substituting into cosine formula
B2 Cos $A + \cos C$ not indicated

Slips (-1)
S1 Arithmetic error

Attempts (3 marks)
A1 Some values substituted into cosine formula for either Cos $A$ or Cos $C$
A2 Cos $A$ or Cos $C$ formula expressed in terms of sides of a triangle
A3 Cos $A$ or Cos $C$ only and stops

Worthless (0)
W1 Cos $A + \cos C = \cos(A+C)$
(b) (ii)  

5 (b) (ii)  

\[
\cos(A + C) = -\cos B = -\left[ \frac{4^2 + 6^2 - 5^2}{2(4)(6)} \right] = -\left[ \frac{16 + 36 - 25}{48} \right] = -\left[ \frac{27}{48} \right] = -\frac{9}{16}.
\]

or

\[
\cos(A + C) = \cos A \cos C - \sin A \sin C = \frac{3}{4} - \frac{1}{8} - \frac{\sqrt{7}}{4} - \frac{3\sqrt{7}}{8} = -\frac{18}{32} = -\frac{9}{16}.
\]

**Blunders (-3)**

B1 \( \cos(A + C) \neq -\cos B \)

B2 Incorrect ratio for \( \sin A \) or \( \sin C \)

B3 Error substituting into expansion of \( \cos(A + C) \)

B4 Conclusion not stated or implied

**Slips (-1)**

S1 Arithmetic error

**Attempts (2 marks)**

A1 \( \cos(A + C) = \cos(180^\circ - B) \) and stops

A2 Some substitution into \( \cos(A + C) \) expansion

A3 Use of Pythagoras

**Worthless (0)**

W1 \( \cos(A + C) = \cos A + \cos C \)

W2 \( \cos(A + C) = \cos A \cdot \cos C \)

---

Part (c) 25(10, 5, 10) marks  

5 (c) (i) Show that \( (\cos A + \cos B)^2 + (\sin A + \sin B)^2 = 2 + 2\cos(A - B) \).

(ii) Hence solve the equation \( (\cos 4x + \cos x)^2 + (\sin 4x + \sin x)^2 = 2 + 2\sqrt{3}\sin 3x \) in the domain \( 0\degree \leq x \leq 360\degree \).

---

5 (c) (i)  

\[
(\cos A + \cos B)^2 + (\sin A + \sin B)^2
= \cos^2 A + 2\cos A\cos B + \cos^2 B + \sin^2 A + 2\sin A\sin B + \sin^2 B
= (\cos^2 A + \sin^2 A) + (\cos^2 B + \sin^2 B) + 2(\cos A\cos B + \sin A\sin B)
= 2 + 2\cos(A - B).
\]

**Blunders (-3)**

B1 Error in squaring

B2 \( \cos^2 A + \sin^2 A \neq 1 \)

B3 \( \cos A\cos B + \sin A\sin B \neq \cos(A - B) \)
Slips (-1)
S1  Arithmetic error

Attempts (3 marks)
A1  \((\cos A + \cos B)^2\) or equivalent correct

(c) (ii) \(\tan 3x\)  

Solutions

\[ (\cos 4x + \cos x)^2 + (\sin 4x + \sin x)^2 = 2 + 2\cos 3x \quad \text{by part (i)}. \]
\[ \therefore 2 + 2\cos 3x = 2 + 2\sqrt{3}\sin 3x \Rightarrow \sqrt{3}\sin 3x = \cos 3x \Rightarrow \frac{\sin 3x}{\cos 3x} = \frac{1}{\sqrt{3}}. \]
\[ \therefore \tan 3x = \frac{1}{\sqrt{3}} \Rightarrow 3x = 30^\circ, 210^\circ, 390^\circ, 570^\circ, 750^\circ, 930^\circ. \]
\[ \therefore x = 10^\circ, 70^\circ, 130^\circ, 190^\circ, 250^\circ, 310^\circ. \]

Or

(c) (ii) \(2\cos(3x + 60^\circ)\)

Solutions

\[ (\cos 4x + \cos x)^2 + (\sin 4x + \sin x)^2 = 2 + 2\cos 3x, \quad \text{by part (i)}. \]
\[ \therefore 2 + 2\cos 3x = 2 + 2\sqrt{3}\sin 3x \Rightarrow \sqrt{3}\sin 3x = \cos 3x \Rightarrow \sqrt{3}\sin 3x - \cos 3x = 0 \]
\[ \Rightarrow \cos 3x - \sqrt{3}\sin 3x = 0 \Rightarrow 2\left(\frac{1}{2}\cos 3x - \frac{\sqrt{3}}{2}\sin 3x\right) = 0 \]
\[ \Rightarrow 2\cos(3x + 60^\circ) = 0 \Rightarrow 3x + 60^\circ = 90^\circ, 270^\circ, 450^\circ, 630^\circ, 810^\circ, 990^\circ \]
\[ \therefore x = 10^\circ, 70^\circ, 130^\circ, 190^\circ, 250^\circ, 310^\circ. \]

Slips (-1)

S1 Arithmetic error

Attempts (2,2,2,2 marks)

A1 Effort at substituting either root into quadratic
A2 Some correct substitution for \( u_{n+1} \) or equivalent
In a café there are 11 seats in a row at the counter.

Six people are seated at the counter. How much more likely is it that all six are seated together than that no two of them are seated together?

Taking arrangements as unordered:

Number of possible ways of seating six people in a row of 11 seats \(= \binom{11}{6} = 462\). To seat six people together, seat them in seats 1 to 6, or 2 to 7, or 3 to 8, or 4 to 9, or 5 to 10, or 6 to 11.

\[\therefore\text{ Number of favourable outcomes } = 6.\]

\[\therefore\text{ Probability of six seated together } = \frac{6}{462}.\]

In order to seat six people with no two together, seat them in seat 1, seat 3, seat 5, seat 7, seat 9 and seat 11. There is no other possible way to seat them. There is only one favourable outcome.

\[\therefore\text{ Probability of no two of them seated together } = \frac{1}{462}.\]

\[\therefore\text{ It is six times more likely that all six people are seated together.}\]

Taking arrangements as ordered:

Number of possible ways of seating six people in a row of 11 seats \(= 11! \binom{5}{6} = 332640\). To seat six people together, seat them in seats 1 to 6, or 2 to 7, or 3 to 8, or 4 to 9, or 5 to 10, or 6 to 11.

\[\therefore\text{ Number of favourable outcomes } = 6 	imes 6! = 4320.\]

\[\therefore\text{ Probability of six seated together } = \frac{4320}{332640}.\]

In order to seat six people with no two together, seat them in seat 1, seat 3, seat 5, seat 7, seat 9 and seat 11. There is no other possible way to seat them. So there are \(1 \times 6! = 720\) favourable outcomes.

\[\therefore\text{ Probability that no two of them seated together } = \frac{720}{332640}.\]

\(4320 = 6 \times 720\), so it is six times more likely that all six people are seated together.

Attempt (6 marks)
A1 Correct expression for one or other case

* Note special case: If the candidate has both probabilities correct but subtracts them instead of dividing: award 17 marks

* Apart from the special case mentioned, award 0, 6, or 20 marks.
QUESTION 7

Part (a) 10 marks Att 3

7 (a) A password for a website consists of capital letters A, B, C, … Z and/or digits 0, 1, 2, …, 9.
   The password has four such characters and starts with a letter. For example, BA7A, C999 and DGKK are allowed, but 7DCA is not.
   Show that there are more than a million possible passwords.

(a) 10 marks Att 3

7 (a) Numbers of possible passwords = 26 \times 36 \times 36 \times 36 = 1,213,056 > 1,000,000.

or

7 (a) Numbers of possible passwords:
   26 \times 26 \times 26 + 3(26 \times 26 \times 10) + 3(26 \times 10 \times 10) + 26 \times 10 \times 10 = 1,213,056 > 1,000,000.

Attempt (3 marks)
A1 Solution with one error

Part (b) 20 (5, 5, 10) marks Att (2, 2, 3)

7 (b) Karen is about to sit an examination at the end of an English course.
   The course has twenty prescribed texts.
   Six of these are novels, four are plays and ten are poems.
   The examination consists of a question on one of the novels, a question on one of the plays and a question on one of the poems.
   Karen has studied four of the novels, three of the plays and seven of the poems.
   Find the probability that:
   (i) Karen has studied all three of the texts on the examination
   (ii) Karen has studied none of the texts on the examination
   (iii) Karen has studied at least two of the texts on the examination.

(b) (i) 5 marks Att 2

7 (b) (i)

Probability (studies all three texts) = \frac{4 \times 3 \times 7}{6 \times 4 \times 10} = \frac{84}{240} = \frac{7}{20}.

Blunders (-3)
B1 Incorrect number of possible outcomes

**Attempt (3 marks)**

A1 Correct expression all three terms in \( P(2 \text{ texts}) \) or all three terms in \( P(1 \text{ text}) \).
The mean of the real numbers $a, 2a, 3a, 4a$ and $5a$ is $\mu$ and the standard deviation is $\sigma$.

(i) Express $\mu$ and $\sigma$ in terms of $a$.

(ii) Hence write down in terms of $a$, the mean and the standard deviation of $3a + 5, 6a + 5, 9a + 5, 12a + 5, 15a + 5$.

\[ \mu = \frac{a + 2a + 3a + 4a + 5a}{5} = \frac{15a}{5} = 3a. \]

\[ \sigma^2 = \frac{(a - 3a)^2 + (2a - 3a)^2 + (3a - 3a)^2 + (4a - 3a)^2 + (5a - 3a)^2}{5} = \frac{4a^2 + a^2 + a^2 + 4a^2}{5} \]

\[ = \frac{10a^2}{5} = 2a^2. \]

\[ \therefore \sigma = \sqrt{2a}. \]

Attempt (3 marks)
A1 Expression for mean or standard deviation correct.

Mean $= 3\mu + 5 = 9a + 5$.

Standard deviation $= 3\sigma = 3\sqrt{2a}$.

* If not ‘Hence’ (i.e. otherwise) 3 marks for mean and/or standard deviation correct

Attempt (3 marks)
A1 Mean or standard deviation correct
QUESTION 8

Part (a) 10 marks Att 3

8 (a) Use integration by parts to find \( \int \log_e x \, dx \).

(a) 10 marks Att 3

\[ \int u \, dv = uv - \int v \, du. \quad \text{Let } u = \log_e x \Rightarrow du = \frac{1}{x} \, dx, \quad dv = dx \Rightarrow v = x. \]

\[ \therefore \int \log_e x \, dx = x \log_e x - \int \left( \frac{1}{x} \right) \, dx = x \log_e x - \int {dx} = x \log_e x - x + C. \]

Blunders (-3)
B1 Incorrect differentiation or integration
B2 Incorrect ‘parts’ formula

Slips (-1)
S1 Arithmetic error
S2 Omits constant of integration

Attempts (3 marks)
A1 One correct assigning to parts formula
A2 Correct differentiation or integration

Part (b) 20 (5, 15) marks Att (-, 5)

8 (b) A rectangle is inscribed between the curve \( y = 9 - x^2 \) and the x-axis, as shown.

(i) Write an expression for the area of the rectangle in terms of \( p \).

(ii) Hence, calculate the area of the largest possible rectangle.

(b) (i) 5 marks Hit/Miss

\[ \text{Length of rectangle } = 2p \text{ and its width } = 9 - p^2. \]
\[ \text{Area of rectangle } = A = 2p(9 - p^2) = 18p - 2p^3. \]
(b) (ii)  15 marks  

\[
\begin{align*}
\therefore \frac{dA}{dp} & = 18 - 6p^2. \text{ For maximum, } \frac{dA}{dp} = 0 \Rightarrow 18 - 6p^2 = 0 \Rightarrow p = \sqrt{3}. \\
\frac{d^2A}{dp^2} & = -12p < 0 \text{ for } p = \sqrt{3}.
\end{align*}
\]

\[
\therefore A = 18\sqrt{3} - 6\sqrt{3} = 12\sqrt{3} \text{ is largest possible rectangle.}
\]

* Note: If candidate gets no marks for (b)(i), then cannot get any marks for (b)(ii).

Attempt (5 marks)

A1 Correct differentiation

Part (c)  20 (10, 5, 5) marks  

8 (c) (i) Derive the Maclaurin series for \( f(x) = \cos x \), up to and including the term containing \( x^6 \).

(ii) Hence, and using the identity \( \sin^2 x = \frac{1}{2}(1 - \cos 2x) \), show that the first three non-zero terms of the Maclaurin series for \( \sin^2 x \) are \( x^2 - \frac{x^4}{3} + \frac{2x^6}{45} \).

(iii) Use these terms to find an approximation for \( \sin^2 \left( \frac{1}{2} \right) \), as a fraction.

8 (c) (i)  10 marks  

\[
\begin{align*}
 f(x) & = f(0) + \frac{f'(0)x}{1!} + \frac{f''(0)x^2}{2!} + \frac{f'''(0)x^3}{3!} + \frac{f''''(0)x^4}{4!} + \ldots \\
 f(x) & = \cos x \quad \Rightarrow \quad f(0) = \cos 0 = 1. \\
f'(x) & = -\sin x \quad \Rightarrow \quad f'(0) = -\sin 0 = 0. \\
f''(x) & = -\cos x \quad \Rightarrow \quad f''(0) = -\cos 0 = -1. \\
f'''(x) & = \sin x \quad \Rightarrow \quad f'''(0) = \sin 0 = 0. \\
f''''(x) & = \cos x \quad \Rightarrow \quad f''''(0) = \cos 0 = 1. \\
f'''''(x) & = -\sin x \quad \Rightarrow \quad f'''''(0) = -\sin 0 = 0. \\
f''''''(x) & = -\cos x \quad \Rightarrow \quad f''''''(0) = -\cos 0 = -1. \\
\therefore f(x) & = \cos x = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \frac{x^6}{6!} + \ldots
\end{align*}
\]

Blunders (-3)

B1 Incorrect differentiation
B2 Incorrect evaluation of \( f^{(n)}(0) \)

**9 (a)**

$Z$ is a random variable with standard normal distribution. Find $P(-1 < Z \leq 1)$.

\[
P(-1 < Z \leq 1) = P(Z \leq 1) - [1 - P(Z \leq 1)] = 2(0.8413) - 1 = 0.6826
\]

or

\[
P(-1 < Z \leq 1) = 2 (P(Z \leq 1) - P(Z \leq 0)) = 2(0.8413 - 0.5) = 0.6826
\]

**Blunders (-3)**

B1 $P(z \leq 1)$ incorrect or $P(Z \leq 0)$ incorrect

B2 Mishandles $P(-1 < Z)$

**Slips (-1)**

S1 Arithmetic error.

**Attempts (3 marks)**

A1 $P(Z \leq 1)$ correct.

**Part (b) 20 (5, 5, 10) marks Att (2, 2, 3)**

**9 (b)**

A test consists of twenty multiple-choice questions. Each question has four possible answers, only one of which is correct. Seán decides to guess all the answers at random.

Find the probability that:

(i) Seán gets none of the answers correct

(ii) Seán gets exactly five of the answers correct

(iii) Seán gets four, five or six of the answers correct.

Give each of your answers correct to three decimals places.

**9 (b) (i)**

\[p = \frac{1}{4}, \quad q = \frac{3}{4}.
\]

Probability (none correct)=$\left(\frac{3}{4}\right)^{20} \approx 0.003.$

**Attempts (3 marks)**
A1 Effort at probability of four or six correct
A bakery produces muffins. A random sample of 50 muffins is selected and weighed. The mean of the sample is 80 grams and the standard deviation is 6 grams. Form a 95% confidence interval for the mean weight of muffins produced by the bakery.

\[ \bar{x} = 80, \ \sigma = 6 \ \text{and} \ n = 50. \]

\[ \sigma_{\bar{x}} = \frac{\sigma}{\sqrt{n}} = \frac{6}{\sqrt{50}} = \frac{6}{5\sqrt{2}} = \frac{3\sqrt{2}}{5}. \]

The 95% confidence interval is

\[ [\bar{x} - 1.96(\sigma_{\bar{x}}), \bar{x} + 1.96(\sigma_{\bar{x}})] = [78.3, 81.6] \text{ grams}. \]

Blunders (−3)
B1 Error in standard error of mean.
B2 Error from tables.
B3 Answer not simplified.

Slips (−1)
S1 Arithmetic error.

Attempts (2, 2, 2 marks)
A1 Standard error of mean with some substitution.
A2 Incomplete substitution.

S1 Arithmetic error

Attempts (2 marks)
A1 $\{a, b, d\}$

Worthless (0)
W1 $\{ b, d, g\}$
W2 No identity element
(b) (v) Establishing link  

Finish

5 marks

Att 2

10 (b) (v)

$K \xrightarrow{\phi} H$

$\begin{array}{ccc}
a & \phi(a) = 1 \\
c & \phi(c) = w \\
f & \phi(f) = w^2 \\
\end{array}$

$a$ and $1$ are the identities of $(K, \circ)$ and $(H, \times)$ respectively.

$\phi(c \circ c) = \phi(f) = w^2$ and $\phi(c) \times \phi(c) = w \times w = w^2$.

$\phi(f \circ f) = \phi(c) = w$ and $\phi(f) \times \phi(f) = w^2 \times w^2 = w^4 = w$.

$\phi(c \circ f) = \phi(a) = 1$ and $\phi(c) \times \phi(f) = w \times w^2 = w^3 = 1$.

$\phi(f \circ c) = \phi(a) = 1$ and $\phi(f) \times \phi(c) = w^2 \times w = w^3 = 1$.

$\phi(a \circ a) = \phi(a) = 1$ and $\phi(a) \times \phi(a) = 1 \times 1 = 1$

$\phi(a \circ c) = \phi(c) = w$ and $\phi(a) \times \phi(c) = w$

$\phi(a \circ f) = \phi(f) = w^2$ and $\phi(a) \times \phi(f) = w^2$

$\phi(c \circ a) = \phi(c) = w$ and $\phi(c) \times \phi(a) = w$

$\phi(f \circ a) = \phi(f) = w^2$ and $\phi(f) \times \phi(a) = w^2$

$\therefore$ Isomorphism.

Alternative Methods:

$K$ is a cyclic group with generator $c$.

$K: \{a,f,c\} \rightarrow \{c^3, c, c^2\}$

$H$ is a cyclic group with generator $w$

Isomorphism: $c^3 \leftrightarrow 1 (or w^3), c \leftrightarrow w, c^2 \leftrightarrow w^2$

Justification:

$K$ and $H$ are both cyclic groups of same order (order 3)

$\Rightarrow K$ and $H$ isomorphic, under any function that maps a generator to a generator and corresponding powers accordingly, as this one does.

or (alternative justification)

Theorem: Any cyclic group of order $n$ is isomorphic to the group of complex $n$th roots of unity

$K$ is a cyclic group of order 3, and $H$ is the group of the cubic roots of unity $\Rightarrow K$ and $H$ isomorphic under this function.

* Using alternative methods above, it is not sufficient to show the groups are isomorphic; an isomorphism must also be given.

Blunders (-3)

B1 Cayley table but links not established

B2 Incomplete justification

Slips (-1)

S1 Arithmetic error

Attempts (2,2 marks)

A1 Link identities only

A2 States order of groups.
QUESTION 11

Part (a) 10 marks Att 3

11 (a) An ellipse with centre \((0, 0)\) has eccentricity \(\frac{4}{5}\) and the length of its major axis is 2 units. Find its equation.

(a) 10 marks Att 3

11 (a) \[2a = 2 \Rightarrow a = 1. \quad b^2 = a^2 \left(1 - e^2\right) \Rightarrow b^2 = 1 \left(1 - \frac{16}{25}\right) \Rightarrow b^2 = \frac{9}{25}.\]

Ellipse: \[\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1 \Rightarrow x^2 + \frac{25y^2}{9} = 1.\]

Blunders (-3)
B1 Incorrect \(a\)
B2 \(b^2\) calculated, but equation not found
B3 Error in forming equation

Slips (-1)
S1 Arithmetic error

Attempts (3 marks)
A1 \(a = 1\)
A2 Some substitution into \(b^2\) formula

Part (b) 20 (10, 10) marks Att (3, 3)

11 (b) \(f\) is an affine transformation. The point \(M\) is the mid-point of the line segment \([AB]\).

(i) Show that \(f(M)\) is the mid-point of the line segment \([f(A)f(B)]\)

(ii) A triangle \(ABC\) has centroid \(G\).

Show that the triangle \(f(A)f(B)f(C)\) has centroid \(f(G)\).
M is on \( AB \Rightarrow f(M) \) is on \( f(AB) \).

\( M \) is mid-point of \( [AB] \Rightarrow \frac{|AM|}{|MB|} = 1 : 1 \).

Ratio of lengths on parallel lines is an affine invariant.

But \( AM \) is parallel to \( MB \) \( \Rightarrow \frac{|f(A)f(M)|}{|f(M)f(B)|} = \frac{|AM|}{|MB|} = 1 \)

\( \Rightarrow f(M) \) is mid-point of \( [f(A)f(B)] \).

or

Let \( f \) be the affine transformation such that \( (x,y) \rightarrow (x',y') \) so that

\[ x' = ax + by + k \quad y' = cx + dy + h, \quad a, b, c, d, k, h \in \mathbb{R} \text{ and } ad - bc \neq 0. \]

Let \((x_1, y_1)\) and \((x_2, y_2)\) be the co-ordinates of \( A \) and \( B \).

\[ f(A) = (ax_1 + by_1 + k, cx_1 + dy_1 + h) \quad \text{and} \quad f(B) = (ax_2 + by_2 + k, cx_2 + dy_2 + h) \]

Midpoint of \([f(A)f(B)]\) = \( \left( \frac{a(x_1 + x_2) + b(y_1 + y_2) + 2k}{2}, \frac{c(x_1 + x_2) + d(y_1 + y_2) + 2h}{2} \right) \)

But \( M, \text{ the midpoint of } [AB], \) is \( \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right) \).

\[ \therefore f(M) = \left( \frac{a(x_1 + x_2)}{2} + b\left( \frac{y_1 + y_2}{2} \right) + k, \quad \frac{c(x_1 + x_2)}{2} + d\left( \frac{y_1 + y_2}{2} \right) + h \right) \]

\[ = \left( \frac{a(x_1 + x_2) + b(y_1 + y_2) + 2k}{2}, \frac{c(x_1 + x_2) + d(y_1 + y_2) + 2h}{2} \right) \]

= midpoint of \([f(A)f(B)]\).

**Blunders (-3)**
- B1 Fails to establish relationship between \( M \) and end points of segment \( A \) and \( B \)
- B2 Fails to establish relationship between segment length and its image under \( f \)
- B3 Incorrect conclusion

**Slips (-1)**
- S1 Arithmetic error

**Attempts (3 marks)**
- A1 Shows some relevant mapping
$D$ and $E$ are mid-points of $[BC]$ and $[AC]$ respectively $\Rightarrow G$ is centroid of $\triangle ABC$.

$[AD]$ and $[BE]$, under $f$, map to $[f(A)f(D)]$ and $[f(B)f(E)]$ respectively.

But mid-point is an affine invariant, $\Rightarrow f(D)$ and $f(E)$ are the mid-points of $[f(B)f(C)]$ and $[f(A)f(C)]$ respectively.

$\therefore [f(A)f(D)] \cap [f(B)f(E)] = f(G)$ is the centroid of $\triangle f(A)f(B)f(C)$.

**Blunders (-3)**
B1 Fails to define centroid
B2 Fails to state mid point invariant
B3 Fails to state that $f(G)$ centroid

**Slips (-1)**
S1 Arithmetic error

**Attempts (3 marks)**
A1 Shows some relevant mapping
**Part (c)** 20(10, 10) marks  

**11 (c)** An ellipse $e$ has equation \[
\frac{x^2}{100} + \frac{y^2}{25} = 1.
\]

$[PQ]$ and $[RS]$ are diameters of the ellipse, where $P$ is $(8,3)$ and $R$ is $(6,-4)$.

(i) Using a transformation to or from the unit circle, or otherwise, show that the diameters $[PQ]$ and $[RS]$ are conjugate.

(ii) Find the area of the parallelogram that circumscribes the ellipse at the points $P$, $S$, $Q$, and $R$.

<table>
<thead>
<tr>
<th>11 (c) (i)</th>
<th>10 marks</th>
<th>Att 3</th>
</tr>
</thead>
</table>

\[ f \text{ is the transformation } (x, y) \rightarrow (x', y') \text{ where } x' = \frac{x}{10}, \; y' = \frac{y}{10}. \]

Therefore, $x = 10x'$, $y = 5y'$

\[
\therefore \; f(e) : \frac{100x^2}{100} + \frac{25y^2}{25} = 1 \Rightarrow x'^2 + y'^2 = 1.
\]

Also $f(P) = \left( \frac{8}{10}, \frac{3}{5} \right) = \left( \frac{4}{5}, \frac{3}{5} \right)$, $f(R) = \left( \frac{6}{10}, -\frac{4}{5} \right) = \left( \frac{3}{5}, -\frac{4}{5} \right)$. Also $f(0,0) = (0,0)$

Slope $f(P)f(Q) = \frac{\frac{3}{5} - 0}{\frac{4}{3} - 0} = \frac{3}{4}$ and slope $f(R)f(S) = \frac{-\frac{4}{5} - 0}{\frac{3}{5} - 0} = -\frac{4}{3}$.

But $\frac{3}{4} \times -\frac{4}{3} = -1 \Rightarrow [f(P)f(Q)]$ and $[f(R)f(S)]$ are conjugate diameters in the circle.

\[ \therefore \text{ diameters } [PQ] \text{ and } [RS] \text{ are conjugate diameters in the ellipse.} \]

**Blunders (-3)**

B1 Error in image of co-ordinates under transformation

MARCANNA BREISE AS UCHT FREAGAIRT TRÍ GHAELGE

(Bonus marks for answering through Irish)

Ba chóir marcanna de réir an ghnáthráta a bhronadh ar iartróirí nach ngnóthaíonn níos mó ná 75% d’iomlán na marcanna don pháipéar. Ba chóir freisin an marc bónais sin a shlánú síos.

Déantar an cinneadh agus an riomhaireacht faoin marc bónais i gcás gach páipéar leithligh.

Is é 5% an gnáthráta agus is é 300 iomlán na marcanna don pháipéar. Mar sin, bain úsáid as an gnáthráta 5% i gcás iartróirí a ghnóthaíonn 225 marc nó níos lú, e.g. 198 marc \( \times 5\% = 9\cdot9 \Rightarrow \) bónas = 9 marc.

Má ghnóthaíonn an t-iartróir níos mó ná 225 marc, ríomhtar an bónas de réir na foirmle \([300 – \text{bunmharc}] \times 15\%\), agus an marc bónais sin a shlánú síos. In ionad an riomhaireacht sin a dhéanamh, is féidir úsáid a bhaint as an tábla thíos.
